

Overview

The U-Test318 family of xDSL testheads has been specifically designed to provide truly world class performance in Central Office based applications. Our Testhead provides the full range of service assurance copper pair test. In today's world where Broadband / IPTV demand ever more performance over short loops, service speeds of up to 100 Mbits, the U-Test318 family also incorporates a full range of wideband test features as one would expect from any world class testhead. The U-Test318 is also available with an integrated modular TASM to provide Test Access.

What distinguishes the U-Test318 from our competitors products is its ability to provide critical xDSL specific measurements which are far beyond the current industry standard capabilities. This family of testheads has been specifically designed for today's xDSL service delivery problem set.

The U-Test318 family is also available with an advanced "Golden Modem" service Test Module supplied by our service partners [Vonaq](#)

Key Benefits

- Out of the box working
- Customisable filters and prioritisation
- Http or secure https, web browser options
- Role based access levels
- XML, TL1 and web access

Key Features

- Full test suite for Copper Line Test
- Future proof Linux platform
- Remote firmware upgradable
- Custom interface options
- EMC, ESD, RoHS, CE compliant

Product Data

- Height: 25mm Width: 425mm Depth: 150mm Weight:1.86kg
- DC / AC Voltage Tests, Resistance Tests, Capacitance Tests
- Noise tests, TDR, Tones, longitudinal balance
- Built on a powerful Linux platform
- TL1, XML and webservices
- Automatic discovery
- Published API's for connection
- Termination test and identification
- Fully compliant with EMC, ESD, CE and RoHS standard
